UBIqube Solutions puts a SOC in the BOX for Network Security - 23/01/2008

UBIqube Solutions, the global managed security services (MSS) solutions provider, has today pushed the industry parameters of network security with the launch of its plug 'n' play Security Operations Centre (SOC) solution, SmartSOC, a unique all-in-one security management appliance.

Providing an enterprise-grade, scalable, turnkey solution, UBIqube's SmartSOC combines network management, Operational Support Systems (OSS) and security management in one hardware package. Unlike solutions that require the use of multiple management servers and consoles, UBIqube's SmartSOC enables IT staff to manage and control security and network appliances with a unified monitoring and reporting web interface.

As a result UBIqube's SmartSOC offers enterprises within the financial, retail and manufacturing sectors multiple benefits including simplifying daily operations through one vendor-agnostic management tool, business flexibility due to the scalability of the SmartSOC approach and a reduced OPEX through a low-cost plug 'n' play solution.

Commenting on the new offering, Nabil Souli, CEO of UBIqube Solutions, said, "Increased connectivity within enterprises has fuelled the demand for greater IT security, particularly in multi-site businesses where information systems spans over multiple locations. We developed our new SmartSOC solution to help ease the management migraines plaguing in-house IT staff by simplifying the monitoring and reporting of the various devices within the network."
