UBIqube Intros Support for Cisco ISRG2 Series

By [Raja Singh Chaudhary](#), TMCnet Contributor

UBIqube Solutions, a provider of integrated network, security and voice management solutions for the IT and Managed Services Industry, has [announced](#) to introduce comprehensive support of Cisco ([News - Alert](#)) ISRG2 800 1900 2900 3900 series and 'Cisco License Manager' or CLM in its MSActivator platform.

Story continues below ↓

The platform provides an integrated solution to provision, monitor and report on network, security and voice managed services. Cutting down operating expenses through standardization and service management automation, the solution enables enterprises to bring new managed services to market in a quick and effective way.

Within the new enhancements introduced by UBIqube Solutions, MSActivator has now been equipped with an easy to use web-based interface to the 'Cisco License Manager' or CLM server, which helps users in conveniently managing licenses for their Cisco devices leveraging the CLM, which features directly through the vSOC console. The users can now add 'Product Activation Key' or 'PAK', collect the associated licenses and deploy them on managed devices in a few clicks right through the UBIqube's web-portal itself.

Apart from it, the new MSActivator release features a number of new introductions, such as out-of-the-box support for provisioning of Cisco ISRG2 devices, the ability to attach managed devices to a CLM server in one click, retrieve activated service license keys & provision ordered features on managed devices, and manage Cisco licenses process lifecycle on devices from a single tool.

The UBIqube MSActivator leverages Cisco CLM software to offer additional value to the customers by drastically simplifying the complexity in the administration of the new integrated features. It also helps customers in creating service bundles and managing complete service life cycle using a single tool, from service definition to deployment of the required per-feature license keys.

According to Hervé Guesdon, Director of Engineering and Product management at UBIqube Solutions, with the advent of the next generation ISR devices, which require a license activation process, license management has become a critical issue for Cisco partners. Guesdon continued that with the UBIqube MSActivator CLM module, these tasks in effect become simple and get automated within the overall solution

workflow, while the associated 'Application Programming Interfaces' or 'APIs' streamline the integration of license management in the SP IT process removing the silo issue. At the same time, off-line licence activation will avoid the security breach posed by permanently internet connected devices, Guesdon added.

Recently, in May 2010, UBIqube Solutions and Dominion/Halógica, a Brazilian IT and Telecom System Integrator, [announced](#) their partnership to launch a suite of innovative managed security services.
