Lattelecom Selects *UBIqube* to provide enhanced Managed Security Services to its customers.

Paris, Feb 26, 2008, *UBIqube* (ubiqube.com) a global MSSP solutions provider will be the foundation for the new pan Baltic CPE based Managed Security Service being launched by *Lattelecom* (Lattelecom.lv) the leading provider of electronic communications services in Latvia.

UBIqube's MSS solution flexibility, scalability, intuitive GUI and extensive features has propelled it to the top of *Lattelecom's* list as the best choice to build a state of the art SOC and provide their enterprise customer base with a large range of managed security services.

Lattelecom will now be able to offer advanced Managed Security Services based on leading security appliances from *Cisco*. Enterprises, SMBs and large, are more and more exposed to IT security threats nowadays and seek from their local service provider assistance above and beyond connectivity solutions. Using *UBIqube's* MSS solution, *Lattelecom* can now offer its customers a complete suite of security services for device provisioning, configuration management, monitoring and reporting. Supported services include Managed VPN, Firewall, IDS/IPS, Anti-Virus, URL Filtering, and Anti-Spam.

"In selecting the *UBIqube* MSS solution, the most important issue was the competence, experience and ability to offer a solution for data service providers and operators," says Ivars Auza, director of *Lattelecom's* Telecommunications Solutions Division. "Now that the platform will be in place, *Lattelecom* will be the first company in the Baltic States to offer security monitoring and management services to its clients."

"First generation MSSPs have invested heavily to build complex and cumbersome SOC (Security Operation Centers) infrastructures aimed at delivering Managed security services" says Eric Brambilla, Sales Director at *UBIqube*. "*UBIqube* offers a proven solution at a fraction of the cost. *Lattelecom* is showing its leadership and vision by taking advantage of our technology to offer a service that will make it the primary choice of security conscious enterprises in the Baltic States".

About *UBIqube*

UBIqube provides telecom operators and system integrators with a suite of modular and scalable security devices management solution for managed

security services delivery. *UBIqube's* technology is also used by large distributed corporations for the holistic management of their CPE based security. To date more than 1,000 international multi-vendor sites are managed using *UBIqube*. *UBIqube* was founded in 2000 as a spin-off of *France Telecom* R&D and has focused its engineering effort on developing a state of the art CPE/security focused OSS/NMS solution.
